Professional Summary

AI-focused Software Engineer who builds agentic AI and full-stack products with Python, FastAPI, React, TypeScript, and LLMs. Currently building Oasys Meet, a real-time meeting platform with WebRTC video, an LLM tool-calling assistant, and AI-generated call summaries. Hands-on across RAG pipelines, agent workflows, real-time APIs, and the interfaces that deliver them. Holds a B.Tech in Artificial Intelligence and Data Science and brings the accuracy developed in compliance-driven insurance claims processing.

Experience

Software Engineer Mar 2026 – Present
OASYS Cybernetics Pvt. Ltd. *Chennai*

- Built Oasys Meet, a full-stack AI meeting platform (React/TypeScript, FastAPI, PostgreSQL, Redis) with 168 REST and WebSocket endpoints, WebRTC/LiveKit video calls for up to 100 participants, chat, and calendar.
- Developed an LLM tool-calling agent with 45 tools that schedules meetings, searches history, and joins live calls, with SSE streaming, long-term memory, live translated captions, and AI-generated call summaries.
- Built RAG pipelines end to end, covering document ingestion, chunking, embeddings, vector search, and reranking, to improve the relevance of LLM-powered knowledge retrieval.

Process Associate Aug 2025 – Dec 2025
Capgemini *Trichy*

- Adjudicated health insurance claims by verifying policy coverage, member eligibility, and supporting documentation to ensure accuracy and regulatory compliance.
- Evaluated claims against insurance guidelines to approve, deny, or modify them while upholding quality standards.
- Maintained accurate claim records, resolved processing discrepancies, and closed cases through timely documentation and stakeholder communication.

Projects

FinPilot AI Jun 2026 – Jul 2026
React.js, FastAPI, PostgreSQL, SQLAlchemy, Google Gemini API, LangChain, Recharts, JWT | GitHub

- Built a full-stack AI personal finance platform with 30+ REST endpoints covering authentication, income, expenses, budgets, goals, dashboards, and AI services.
- Developed AI advisor features (chat, spending analysis, savings forecast, and budget and goal recommendations) using the Gemini API and LangChain on users' aggregated financial data.
- Secured the platform with JWT authentication, bcrypt password hashing, OTP verification for contact changes, and protected frontend and backend routes.
- Created responsive analytics dashboards with Recharts (income vs. expense, category breakdown, goal progress) and per-category monthly budgets tracked against live spending.

Employee Handbook RAG Jul 2026
Python, Streamlit, ChromaDB, Sentence Transformers, Google Gemini API, pypdf | GitHub

- Built an end-to-end RAG assistant that answers natural-language questions about an employee handbook using semantic search and Gemini-generated responses.
- Engineered a modular ingestion and retrieval pipeline: PDF parsing with pypdf, text chunking, Sentence Transformers embeddings, and persistent vector storage in ChromaDB.
- Grounded Gemini responses in retrieved handbook passages to keep answers context-aware and limit hallucination, served through a real-time Streamlit interface.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL, HTML/CSS
AI & LLM: Agentic AI, LLM Tool Calling, RAG, LangChain, OpenAI & Anthropic APIs, Google Gemini API, Whisper, Prompt Engineering, Vector Embeddings, Semantic Search, Reranking
Backend: FastAPI, REST APIs, WebSockets, Server-Sent Events, SQLAlchemy, Alembic, Pydantic, JWT, OAuth, Redis Pub/Sub
Frontend & Real-time: React.js, TypeScript, Vite, Tailwind CSS, Streamlit, Recharts, WebRTC, LiveKit (SFU), TURN/STUN
Databases & Storage: PostgreSQL, Redis, ChromaDB, MinIO/S3
DevOps & Tools: Docker, nginx, Git, GitLab, GitHub, pytest, Vitest, Postman, Swagger/OpenAPI, VS Code

Education

K. Ramakrishnan College of Technology Samayapuram, Trichy
Bachelor of Technology in Artificial Intelligence and Data Science *2020 – 2024*
